PROFESSIONAL SUMMARY

Full-Stack Developer and Mechatronics Engineering student with hands-on experience architecting microservices, building modern web applications with React and Next.js, and containerizing production deployments with Docker Compose on Linux VPS. Experienced in designing decoupled backend architectures, RESTful API gateways, and managing relational/NoSQL schemas. Strong engineering foundation in hardware-software integration, computer vision, and robotics. Focused on building reliable, maintainable systems and automated delivery pipelines.

TECHNICAL SKILLS

Frontend & Mobile:	React, Next.js 16, TypeScript, JavaScript (ES6+), React Native, Expo, Tailwind CSS, Redux, HTML5, CSS3
Backend & APIs:	Node.js, Express.js, Microservices Architecture, RESTful APIs, API Gateway Design, JWT Authentication
Databases & Storage:	MongoDB (Mongoose), PostgreSQL, MySQL, Relational & NoSQL Schema Design, Query Optimization
DevOps & Cloud:	Docker & Docker Compose, Linux VPS Administration, Nginx Reverse Proxy (SSL/TLS, Caching), CI/CD, Health Checks
Embedded & Systems:	Python, C/C++ (Embedded / IoT), ESP32, Arduino, PlatformIO, OpenCV / Computer Vision, Motor Control
Languages:	English (Working Proficiency), Burmese (Native), Japanese (JLPT N4 Passed)

WORK EXPERIENCE

Junior Full Stack Developer

`Jan 2026 – Present`

Full-Time Web Developer

- Engineered responsive, dynamic web applications with React and Next.js, optimizing frontend performance and state management.
- Developed scalable RESTful APIs, backend business logic, and database schemas using Node.js, Express, and MongoDB.
- Participated in containerized deployments using Docker Compose on Linux VPS environments, collaborating on CI/CD pipelines.

Freelance Full-Stack & DevOps Developer

`Available from Dec 2026`

Independent Contractor

- Architecting client portals and full-stack web applications with modern React/Next.js frontends and Node.js backends.
- Configuring multi-service container environments with Docker Compose, automated SSL renewal, and Nginx reverse proxying.

FEATURED PROJECTS

Smart Campus Management System (CMS) • Solo Architect & Developer

`github.com/YeYintLin/campus_management_system`

Stack: React, Node.js, Express, Microservices Architecture, MongoDB, Docker Compose, Gemini AI API

- Architected a decoupled microservices platform with a centralized API Gateway handling JWT validation, rate limiting, and reverse routing.
- Engineered 3 isolated MongoDB instances across a 28-entity schema (Students, Faculty, Academics, Finance) eliminating schema contention.
- Integrated Google Gemini AI API for intelligent natural-language student inquiry assistance.
- Containerized the entire multi-service ecosystem using Docker Compose with isolated private bridge networks.

Infinity Fitness Management Platform • Full-Stack & Mobile Developer

Stack: Next.js, React Native, Expo, TypeScript, Node.js, PostgreSQL, Docker Compose

- Built an administrative web dashboard in Next.js for branch management, member tiers, trainer scheduling, and attendance logging.
- Developed cross-platform iOS/Android mobile client in React Native & Expo for self-service class bookings and membership renewals.
- Designed normalized PostgreSQL database schemas for transactional booking and real-time attendance verification.

TKMLMS (Myanmar-Language Localized LMS) • Full-Stack & DevOps Engineer

Stack: React, Node.js, PHP, MySQL, Docker, Nginx, Linux VPS

- Created localized learning portal components supporting native Burmese font rendering, assignment submission, and course delivery.
- Configured production Nginx reverse proxy with SSL termination, HTTP/2 optimizations, and static asset caching.
- Established automated cron-driven MySQL database backups and container health check monitoring on Linux VPS.

Autonomous Mobile Robotics & Computer Vision • Mechatronics Capstone

Stack: Python, OpenCV, SSD MobileNet V2, C++, PlatformIO, Arduino/ESP32

- Developed an autonomous human-chasing mobile robot using SSD MobileNet V2 for real-time person detection and tracking.
- Engineered a color and shape detection mobile robot using OpenCV image processing and PlatformIO for closed-loop motor control.

EDUCATION

Bachelor of Engineering (B.E.) in Mechatronics Engineering

`2018 – Expected Jan 2027`

Technological University (Hmawbi) / University of Technology (Hmawbi)

Relevant Coursework: Modern Control Systems, Automation & Robotics, Machine Vision, Embedded Systems, Software Engineering.
