Ye Yint Lin

Full-Stack Developer with DevOps skills | B.E. Mechatronics Engineering

altairsetsuna146@gmail.com | Yangon, Myanmar (UTC+6:30) | github.com/YeYintLin | linkedin.com/in/ye-yint-lin-altair

PROFESSIONAL SUMMARY

Full-stack developer and Mechatronics Engineering student. I build web applications with React and Next.js, Node.js microservices and REST APIs backed by PostgreSQL and MongoDB, and deploy them with Docker Compose on Linux VPS. Background in embedded systems, computer vision, and hardware-software integration. Focused on reliable, maintainable systems and automated delivery.

TECHNICAL SKILLS

Frontend & Mobile	React, Next.js, TypeScript, JavaScript (ES6+), React Native, Expo, Tailwind CSS, Redux, HTML5, CSS3
Backend & APIs	Node.js, Express.js, microservices architecture, RESTful APIs, API gateway design, JWT authentication
Databases	PostgreSQL, MongoDB (Mongoose), MySQL, schema design, query optimization
DevOps & Cloud	Docker, Docker Compose, Linux VPS administration, Nginx reverse proxy (SSL/TLS, caching), CI/CD, health checks
Embedded & Systems	Python, C/C++, ESP32, Arduino, PlatformIO, OpenCV, motor control
Languages	English (working proficiency), Burmese (native), Japanese (JLPT N4)

WORK EXPERIENCE

Junior Full Stack Developer | Full-time — Jan 2026 – Present

- Built responsive web applications with React and Next.js, focusing on frontend performance and state management.
- Developed RESTful APIs, business logic, and database schemas with Node.js, Express, and MongoDB.
- Contributed to containerized deployments with Docker Compose on Linux VPS and to CI/CD pipelines.

Freelance Full-Stack & DevOps Developer | Independent — Available from Dec 2026

- Building client portals and full-stack web applications with React/Next.js frontends and Node.js backends.
- Setting up multi-service Docker Compose environments with Nginx reverse proxy and automated SSL renewal.

FEATURED PROJECTS

Smart Campus Management System | Solo architect & developer — GitHub

Stack: React, Node.js, Express, MongoDB, Docker Compose, Gemini AI API

- Designed a decoupled microservices platform with a central API gateway handling JWT validation, rate limiting, and routing.
- Built 3 isolated MongoDB instances across a 28-entity schema (Students, Faculty, Academics, Finance).
- Integrated the Google Gemini API for natural-language student inquiries.
- Containerized all services with Docker Compose using isolated private bridge networks.

Infinity Fitness Management Platform | Full-stack & mobile developer

Stack: Next.js, React Native, Expo, TypeScript, Node.js, PostgreSQL, Docker Compose

- Built a Next.js admin dashboard for branch management, member tiers, trainer scheduling, and attendance logging.
- Developed an iOS/Android client in React Native and Expo for class bookings and membership renewals.
- Designed normalized PostgreSQL schemas for transactional bookings and attendance verification.

TKMLMS (Myanmar-language LMS) | Full-stack & DevOps engineer

Stack: React, Node.js, PHP, MySQL, Docker, Nginx, Linux VPS

- Built learning-portal components with Burmese font rendering, assignment submission, and course delivery.
- Configured production Nginx with SSL termination, HTTP/2, and static asset caching.
- Set up cron-driven MySQL backups and container health checks on a Linux VPS.

Autonomous Mobile Robotics & Computer Vision | Mechatronics capstone

Stack: Python, OpenCV, SSD MobileNet V2, C++, PlatformIO, Arduino/ESP32

- Built a human-following mobile robot using SSD MobileNet V2 for real-time person detection and tracking.
- Built a color- and shape-detecting robot using OpenCV and PlatformIO for closed-loop motor control.

EDUCATION

B.E. Mechatronics Engineering | University of Technology (Hmawbi) — 2018 – Expected Jan 2027

Coursework: Modern Control Systems, Automation & Robotics, Machine Vision, Embedded Systems, Software Engineering.
